

____ Números mixtos ____

Solución

* Convierte en números mixtos estas fracciones:

$$\frac{39}{7} = 5 \frac{4}{7}$$

$$\begin{array}{r} 39 \overline{) 7} \\ 4 \end{array}$$

$$\frac{74}{9} = 8 \frac{2}{9}$$

$$\begin{array}{r} 74 \overline{) 9} \\ 2 \end{array}$$

$$\frac{22}{3} = 7 \frac{1}{3}$$

$$\begin{array}{r} 22 \overline{) 3} \\ 1 \end{array}$$

$$\frac{36}{5} = 7 \frac{1}{5}$$

$$\begin{array}{r} 36 \overline{) 5} \\ 1 \end{array}$$

$$\frac{41}{7} = 5 \frac{6}{7}$$

$$\begin{array}{r} 41 \overline{) 7} \\ 6 \end{array}$$

$$\frac{84}{9} = 9 \frac{3}{9}$$

$$\begin{array}{r} 84 \overline{) 9} \\ 3 \end{array}$$

$$\frac{91}{11} = 8 \frac{3}{11}$$

$$\begin{array}{r} 91 \overline{) 11} \\ 3 \end{array}$$

$$\frac{21}{6} = 3 \frac{3}{6}$$

$$\begin{array}{r} 21 \overline{) 6} \\ 3 \end{array}$$

* Convierte en fracciones estos números mixtos:

$$2 \frac{3}{5} = \frac{13}{5}$$

$$2 + \frac{3}{5} = \frac{10+3}{5} = \frac{13}{5}$$

$$5 \frac{1}{4} = \frac{21}{4}$$

$$5 + \frac{1}{4} = \frac{20+1}{4} = \frac{21}{4}$$

$$1 \frac{1}{6} = \frac{7}{6}$$

$$1 + \frac{1}{6} = \frac{6+1}{6} = \frac{7}{6}$$

$$2 \frac{2}{3} = \frac{8}{3}$$

$$2 + \frac{2}{3} = \frac{6+2}{3} = \frac{8}{3}$$

$$3 \frac{5}{6} = \frac{23}{6}$$

$$3 + \frac{5}{6} = \frac{18+5}{6} = \frac{23}{6}$$

$$1 \frac{1}{2} = \frac{3}{2}$$

$$1 + \frac{1}{2} = \frac{2+1}{2} = \frac{3}{2}$$

$$3 \frac{2}{3} = \frac{11}{3}$$

$$3 + \frac{2}{3} = \frac{9+2}{3} = \frac{11}{3}$$

$$4 \frac{4}{3} = \frac{16}{3}$$

$$4 + \frac{4}{3} = \frac{12+4}{3} = \frac{16}{3}$$
